# ZM10 SILICONE

## MEKO FREE SILICONE

A **low modulus, neutral** curing silicone sealant based on a **zero Meko** curing system for use by professional sealant applicators and in the glazing and cladding industries.

Traditional oxime silicones are based on methyl ethyl ketoxime (MEKO), which are considered to be carcinogenic. Compared to oxime silicones, ZM10 does not give rise to critical emissions, it gives off **no solvents** or **corrosive vapours** whilst setting. This makes it ideal for interior applications without restriction nor requiring any additional safety measures.

ZM10 oxime-free technology offers impressive **user safety** and excellent suitability - an all-in-one solution that covers virtually every application, whether it be **internal** or **external**.

**Application:** Cures to give a flexible seal. Ideal for expansion joints.

ZM10 is compatible with all metals and plastics. For use on glass, ceramics, all metals, metal cladding, concrete, painted and unpainted timber, brick, plastics, including PVCu, all painted surfaces, marble, travertine and most stone.

### Order Details:

Code	Colour	Size	Box Qty	Barcode
BDZM10WH	White	300ml	12	5060021372291

✓ Safer to use - no carcinogenic components!

✓ High quality formulation.

✓ Suitable for most sealant applications.

Conforms to  
EN15651-1,2,3,4 F  
EXT-INT 25LM; XS1  
PW-EXT-INT, 25L.M
