

BENEFITS OF THE RELOAD SYSTEM

Order Code:
RLCART (x 12 reusable
sleeves)

- **Less waste** - only a small amount of aluminium packing is left.
- **Lower costs** - as the slugs are smaller and lighter by up to 60% than the plastic cartridges, this means less costs being spent on site removal.
- **Environmentally friendly** - using this system shows a commitment to environmental issues and requirements and could give you a competitive edge over other suppliers.
- Popular **300ml** sausages, dispensed in a re-usable sleeve cartridge.
- **No expensive** application guns required, standard skeleton type gun.
- The plastic sleeve can be used **again and again**, on average 75 times, and is recyclable at the end of its usable lifespan.
- **Will not** jam in use, unlike conventional cartridges and guns.
- Sausage contains **high grade** silicone or sealant at less cost per ml than current fills.
- Major **cost savings** on waste disposal. When empty the Reload slug is approx 8 times less in volume than a standard sealant cartridge and over 60% lighter. Less bulk and less weight!
- For every sausage you are paying **50% less** on pack costs when compared to a traditional cartridge.
- Outer carton packaging is **recycled**. Supporting responsible use of forest resources.

Load the sausage

Snip the foil

Attach the nozzle

Gun out

Discard the slug then
RELOAD
its that simple!!

Recycled boxes: supporting responsible use
of forest resources

RELOAD
Low waste, eco friendly system

**THE RE-USABLE SILICONE
CARTRIDGE SYSTEM**

**THE SEALANT SOLUTION TO
REDUCING POLLUTION**

BEING GREEN AND SAVING MONEY!

THE FACTS

A key issue in building conditions nowadays is the issue of site waste, which appears to be on the increase.

Not only does it impact heavily on the environment which is reflected in your credentials, the sheer costs associated with waste disposal is phenomenal.

Site Waste Management Plans are becoming statutory practice for building projects over £300,000, recording the types of waste and the volume of waste generated per job which you as construction workers will be responsible for.

The need for Site Waste Control is becoming more important because:

- **LANDFILL AVAILABILITY IS GETTING LOW:** Over the next decade landfill sites will become scarce due to over filling. This means waste will have to travel further for disposal at a premium cost.
- **GROWING WASTE DISPOSAL COSTS:** Landfill tax is on the increase every year. We are currently paying in excess of £91 per tonne of waste, so weight is key when disposing of products.
- **NON-DEGRADABLE MATERIALS:** It has been estimated that over 100 million plastic sealant cartridges are dumped into landfill sites every year – that equals 6000 tonnes in weight.
- **IMPACT ON THE ENVIRONMENT:** With environmental policies being constantly improved and more stringent, both the Government and industry in general have targeted themselves with reducing the volume of construction waste each year.

Our responsibility as a manufacturer is to contribute where possible in making this achievable by introducing innovative environmentally friendly, sustainable packaging!

SIMPLE 6 STEP SYSTEM

Sealant is encased in a foil sausage, this simply inserts into the plastic (re-usable) cartridge, snip the end with scissors, fit the nozzle and cut as with standard cartridges and away you go.

Once the sealant is used simply remove the spent slug and dispose of. Select your next sausage, reload and repeat the process.

- Cuts down on waste • Cuts down on time • Cuts down on costs.
- Be green AND save money!

1 Insert in plastic sleeve

2 Snip end of sausage

3 Attach nozzle and cut to required angle

4 Place in extruder and use

5 Remove from gun, unclip the lid

6 Flip the aluminium slug out then **RELOAD!**

REDUCING POLLUTION

The same trusted formulations but now in EU3 filled aluminium foils:

WP100: A high grade LMN silicone for perimeter sealing of external door and window frames. Rapid curing with good adhesion properties and additional uPVC adhesion promoters. Available in white. Order Code - Refills: RLSWPWH Kits: RLKWPWH

MULTI-PURPOSE: A multi-purpose, acetoxo silicone rubber sealant which contains fungicide. Suitable for most sealing jobs around the home both inside and out. Suitable for sealing and waterproofing in areas of high humidity. It has excellent adhesion to glass, glazed surfaces, ceramic tiles, many plastics and most paints. Available in white and translucent. Order Code - Refills: RLSMWH; RLSMT Kits: RLKMWH; RLKMT

FRAME-MATE: A high quality, water-resistant, water based frame sealant with good adhesion to most building materials. Easy to clean, flexible joint filler which can be over painted, stained or varnished for colour matching purposes. Suitable for sealing around door and window frames and soffit boards with limited movement. It can also be used for filling cracks and joints with low movement. Not suitable for uPVC. Available in white. Order Code - Refills: RLSFMWH Kits: RLKFMWH

The shelf life of the products used in the Reload system is 24 months. Being impervious the foil helps to preserve the characteristics of the filled material for longer.
